Program
 EPD Danmark
www.epddanmark.dk

- Industry EPD
- Product EPD

Basis of calculation

This EPD is developed in accordance with the European standard EN 15804+A2.

Comparability

EPDs of construction products may not be comparable if they do not comply with the requirements in EN 15804. EPD data may not be comparable if the datasets used are not developed in accordance with EN 15804 and if the background systems are not based on the same database.

Validity

This EPD has been verified in accordance with ISO 14025 and is valid for 5 years from the date of issue.

Use

The intended use of an EPD is to communicate scientifically based environmental information for construction products, for the purpose of assessing the environmental performance of buildings.

Declared product(s)
 Viking 400

Number of declared datasets/product variations: 1

Production site

Building Product Design, Plymouth Avenue, Pinxton, United Kingdom

Certificates of green electricity or biogas are not used in module A3

EPD type

- Cradle-to-gate with modules C1-C4 and D
- Cradle-to-gate with options, modules C1-C4 and D
- Cradle-to-grave and module D
- Cradle-to-gate
- Cradle-to-gate with options

Product(s) use

Vapour permeable roof tile underlay

Declared/ functional unit

1 m²

Year of production site data (A3)

2021

EPD version

2nd version, 20.08.2024 – Updated logo.

CEN standard EN 15804 serves as the core PCR

Product information

Product description

The main product components are shown in the table below.

Material	Weight-% of declared product
80 foil	48
Polypropylene spunbond	20
Polypropylene grid	16
Microporous polypropylene film	11
Ink	<1
Hot melt adhesive	5

Product packaging:

The composition of the sales- and transport packaging of the product is shown in the table below.

Material	Weight-% of packaging
Polyethylene LDPE	6
Cardboard core	27
Wooden pellet	66
Roll label	1

Representativity

This declaration, including data collection and the modeled foreground system including results, represents the production of Viking 400 on the production site located in Pinxton, United Kingdom. Product specific data are based on average values collected for the year 2021. Background data are based on GaBi Professional 2022 and Ecoinvent v3.8 and are mostly less than 3 years old. All background processes is bases on reference data from 2018 or newer, or review to be valid. Generally, the used background datasets are of high quality.

Hazardous substances

Viking 400 does not contain substances listed on the "Candidate List of Substances of Very High Concern for authorisation"

(<http://echa.europa.eu/candidate-list-table>)

Essential characteristics

Vapour permeable underlay for use in roof and wall constructions.

Viking 400 is covered by harmonised technical specification EN 13859-1. Declaration of performance according to EU regulation 305/2011 is available for all declared product variations.

Further technical information can be obtained by contacting the manufacturer or on the manufacturers website: www.komproment.dk

Reference Service Life (RSL)

The reference service life is not declared, since module B is not included.

Picture of product(s)

LCA background

Declared unit

The LCI and LCIA results in this EPD relates to 1 m² of Viking 400.

Name	Value	Unit
Declared unit	1	m ²
Density	0.255	kg/m ²
Conversion factor to 1 kg.	3.9	-

Functional unit

Only the declared unit is used.

PCR

This EPD is developed according to the core rules for the product category of construction products in EN 15804+A2:2019.

Guarantee of Origin – certificates

Foreground system:

The product is produced using electricity grid mix for United Kingdom. No guarantees of origin (GO) are applied.

Background system:

Upstream and downstream processes are modelled using electricity grid mix.

System boundary

This EPD is based on a cradle-to-gate with options LCA, in which 100 weight-% has been accounted for.

The general rules for the exclusion of inputs and outputs follows the requirements in EN 15804, 6.3.5, where the total of neglected input flows per module shall be a maximum of 5 % of energy usage and mass and 1 % of energy usage and mass for unit processes.

Product stage (A1-A3) includes:

A1 – Extraction and processing of raw materials

A2 – Transport to the production site

A3 – Manufacturing processes

The modules A1-A3 are aggregated and comprise the acquisition of all raw materials, products and

Flowdiagram

energy, transport to the production site, packaging and waste processing of both waste from manufacturing and treatment of raw material packaging waste up to the “end-of-waste” state or final disposal. The production waste from manufacturing is sent to landfill.

The manufacturing process consists of 4 main steps: an adhesive lamination process, where the single layers of raw materials are melted into one layer, a printing process, an inkwash and perforation of the 80-foil, and a conversion process where the rolls are finished and ready for packaging.

Construction process stage (A4-A5) includes:

The roof underlay is transported to the construction site by truck. A distance of 1526 km from producent to depot and a distance of 300 km from depot to building site in Europe have been used.

5% installation waste is assumed.

The roof underlay is typically installed manually and does not require energy consumption. The installation phase includes the waste handling of product packaging materials and installation waste. Credits due to recycling or energy recovery is credited in module D.

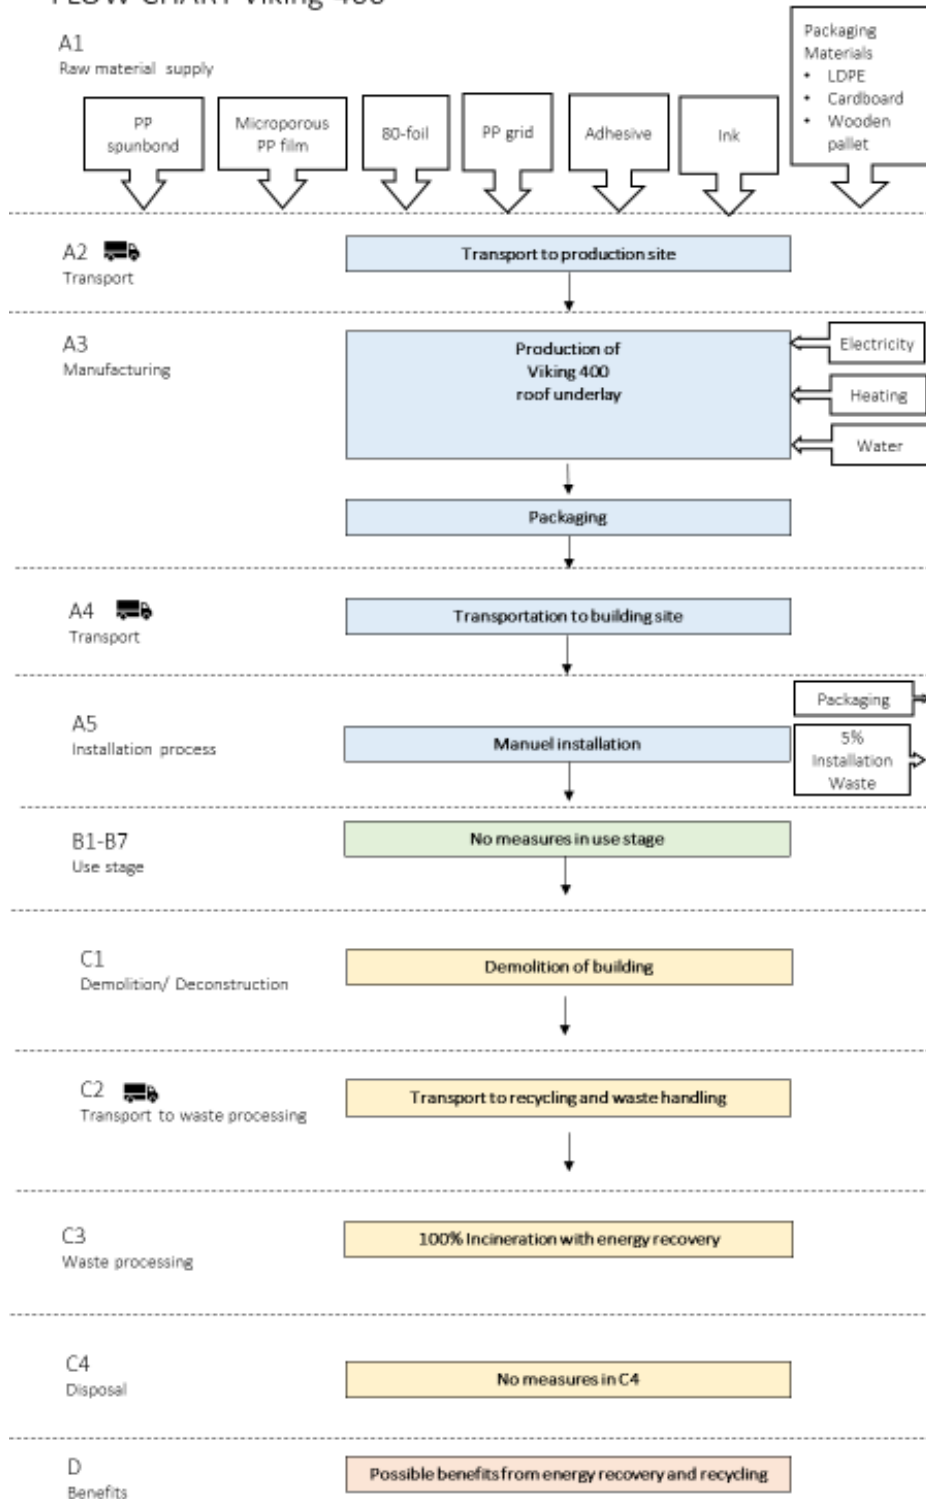

End of Life (C1-C4) includes:

The roof underlay is manually removed from the roof. The roof underlay is transported by truck to a waste management facility in Europe. A 100% waste scenario with incineration have been used, because the layers are glued together. Credits due to energy recovery is credited in module D.

Re-use, recovery and recycling potential (D) includes:

Module D includes material credits and thermal and electrical energy credits from recycling of product packaging, installation waste and product waste.

BIOGENIC CARBON CONTENT PER 1 m ² Viking 400		
Parameter	Unit	At the factory gate
Biogenic carbon content in product	[kg C]	0
Biogenic carbon content in accompanying packaging	[kg C]	0.01
Note: 1 kg biogenic carbon is equivalent to 44/12 kg of CO ₂		

Additional information

LCA interpretation

The results of the current EPD refer to 1 m² of Viking 400 roof underlay. The calculated environmental impacts show that raw material module A1 has the largest contribution to the total impact in 15 out of the 19 environmental impact categories. In particular, the production of polypropylene spunbond is the process with the highest contribution.

Technical information on scenarios

Transport to the building site (A4)

Scenario information	Value	Unit
Fuel type	Diesel	-
Vehicle type	EURO 6	-
Transport distance	1526 + 300	km
Capacity utilisation (including empty runs)	26 - 28t gross weight / 18.4t payload, utilization factor 55%	%
Area density of products transported	0.255	kg/m ²
Capacity utilisation volume factor	1	-

Installation of the product in the building (A5)

Scenario information	Value	Unit
Ancillary materials	0	kg
Water use	0	m ³
Other resource use	0	kg
Energy type and consumption	0	kWh
Waste materials	0.037	kg
Output materials	0	kg
Direct emissions to air, soil or water	0	kg

End of life (C1-C4)

Scenario information	Value	Unit
Collected separately	0.243	kg
Collected with mixed waste	0.0	kg
For reuse	0.0	kg
For recycling	0.0	kg
For energy recovery through waste incineration	0.243	kg
For final disposal	0.0	kg

Re-use, recovery and recycling potential (D)

Scenario information/Materiel	Value	Unit
Materials for recycling	0.02	Kg
Electricity form energy recovery through waste incineration	1.59	MJ
Heat form energy recovery through waste incineration	2.84	MJ

Indoor air

The EPD does not give information on release of dangerous substances to indoor air because the horizontal standards on the relevant measurements are not available. Read more in EN15804+A1 chapter 7.4.1.

Soil and water

The EPD does not give information on release of dangerous substances to soil and water because the horizontal standards on the relevant measurements are not available. Read more in EN15804+A1 chapter 7.4.2.
