■ Product EPD
□ Project EPD
□ Industri EPD

Declared product:
Sundolitt L-element

Number of declared datasets/product variations: [16]
The EPD covers a specific product and is a specific EPD.

Production site
Vårgårda, Sweden: Nordgårdsvägen 2, 447 82 Vårgårda.

No use of green energy certificates. Residual mix is used.

Product(s) use
Expanded polystyrene (EPS) insulation is used for heat insulation in buildings. EPS has a very long service life, excellent insulation properties, low moisture absorption and high compressive stress.

Declared unit
1 m³ of insulation material with λ-value = 0,034W/mK within an expected service life for insulation materials.

Year of energy data (A3)
2023

Year of production site data (A3)
2025

EPD version

Basis of calculation
This EPD is developed in accordance with the European standard EN 15804+A2.

Comparability
EPDs of construction products may not be comparable if they do not comply with the requirements in EN 15804. EPD data may not be comparable if the datasets used are not developed in accordance with EN 15804 and if the background systems are not based on the same database.

Validity
This EPD has been verified in accordance with ISO 14025 and is valid for 5 years from the date of issue.

Use
The intended use of an EPD is to communicate scientifically based environmental information for construction products, for the purpose of assessing the environmental performance of buildings.

EPD type

Product information

Product description

The main product components are shown in the tables below.

Material	Weight-% of declared product
White polystyrene beads, primary material	33%
Fiber cement boards	67%
Total weight of product	100%

Product packaging

The composition of the sales- and transport packaging of the product is shown in the table below.

Material	Weight-% of packaging
LDPE foil	2%
Wooden pallet	98%
Sum	100%

Representativity

This declaration, including data collection and the modelled foreground system including results, represents the production of Sundolitt L-element on the production site located in Sweden. Product specific data are based on average values collected in the period 2025. Background data are based on GaBi Professional 2023 and Ecoinvent 3.9 and are less than 5 years old. Generally, the used background datasets are of high quality, and the majority ofthe datasets are only a couple of years old.

Hazardous substances

Sundolitt L-element do not contain substances listed in the ”Candidate List of Substances of Very High Concern for authorization” (http://echa.europa.eu/candidate-list-table). Absence of these substances is declared by Sundolitt AB. The products do not contain any fire retardants.

Essential characteristics (CE)

EPS is a common plastic foam insulation for building structures. EPS contains 98% air, resulting in a product with low weight, high compressive stress, and good insulating properties. EPS primarily consists of polystyrene.

The density of EPS can be adjusted, and the compressive stress of the product increases with an increasing density. The specific density of this product can be found in the section "Declared unit".

The fiber cement board consists of compressed composite materials of sand, cement and wood fiber without color addition and it is then naturally gray in color. The thickness of the plate is 6 mm and the size is similar to the insulation plate so the elements can be joined. The plate has a density of 1800 kg/m³. The plate protects the insulation material against impact, ignition, moisture etc.

The declared products are covered by harmonized technical specification DS/EN13163.

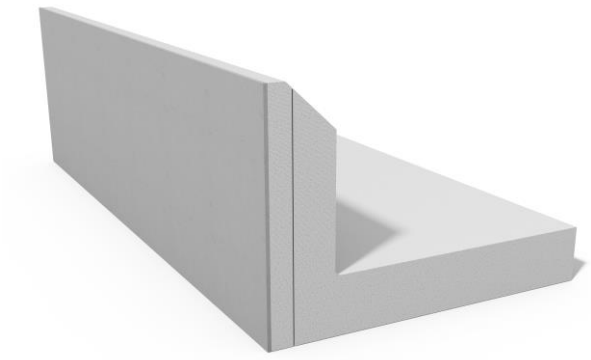
Further technical information can be obtained by contacting Manufacture or on their website:

www.sundolitt.se

Reference Service Life (RSL)

The reference service life of insulation products varies depending on where in the building the products are used. The service life tables from BUILD (BUILD) can be used to determine the reference service life of insulation products in various building contexts.

Picture of product



LCA background

Declared unit

The LCI and LCIA results in this EPD relates to 1 m³ of insulation material with λ-value = 0,034W/mK within an expected service life for insulation materials.

Name	Value
Declared unit	1 m³ of insulation material with λ-value = 0,034W/mK
Density [kg/m³ insulation material]	26,20
Thickness [mm]	34
Weight [kg/DU]	80,47
Conversion factor to 1 kg.	0,012

PCR

This EPD is developed according to the core rules for the product category of construction products in EN 15804+A2 and the complementary Product Category Rules (c-PCR) EN 16783:2024.

Guarantee of Origin – certificates

Foreground system:

No use of green energy certificates. Residual mix is used.

The electricity is used for manufacturing at the production site. No other energy processed are included in the foreground.

Background system:

Both upstream processes are modelled using residual mix. Downstream processes are modelled using grid mix.

System boundaries

This EPD is based on a cradle-to-gate with options LCA, in which 100 weight-% has been accounted for.

The general rules for the exclusion of inputs and outputs follows the requirements in EN 15804, 6.3.5, where the total of neglected input flows per module shall be a maximum of 5 % of energy usage and mass and 1 % of energy usage and mass for unit processes. No known flows are emitted according to the EN15804 cut of criteria.

Product stage (A1-A3) includes:

A1 – Extraction and processing of raw materials

A2 – Transport to the production site

A3 – Manufacturing processes

The product stage comprises the acquisition of all raw materials, products and energy, transport to the production site, packaging, and waste processing up to the ‘‘end-of-waste” state or final disposal.

EPS is manufactured by using steam, making the polystyrene beads expand due to the release of pentane. The size of the beads is controlled and relates to the density of the end-product.

No solid waste is generated from the production of EPS products, as waste is immediately returned to production line. However, some solid waste is produced from the raw material packaging, e.g., cardboard.

The pentane content in the EPS products is highest right after production, where after it continues to decrease. After approximately one month almost all the pentane has been emitted from the products. The release of pentane is reported in module A3 since it relates to the production.

The fiber cement board consists of compressed composite materials of sand, cement and wood fiber without color addition and it is then naturally gray in color. The plate has a density of 1600 kg/m³. The fiber cement board is delivered ready to use and is joined with the insulation material in A3.

Construction stage (A4-A5) includes:

The Sundolitt L-element is transported 300 km with a Large truck (more than 115 m³, more than 32 ton) to the construction site.

The transport of Packaging waste is transported 60 km with a Diesel truck, with a payload of max 32 ton, euronorm 6 (GLO).

End of Life (C1-C4) includes:

The Sundolitt L-element product is dismantled manually, thus, no environmental impacts are

associated with module C1. In both scenario 1 and scenario 2, the dismantled product is transported 60 km to a waste handling facility by a EURO 6 diesel truck.

In scenario 1, the dismantled insulation material reaches its end-of-waste stage at the recycling and sorting facility and it is therefore no longer viewed as waste. Material credits for recycling of polystyrene is included in module D. In scenario 2, incineration of the dismantled insulation product is included in module C4. Energy credits related to energy recovery from the incineration is included in module D.

In both scenarios the Fiber Cement Board is sent for Landfill.

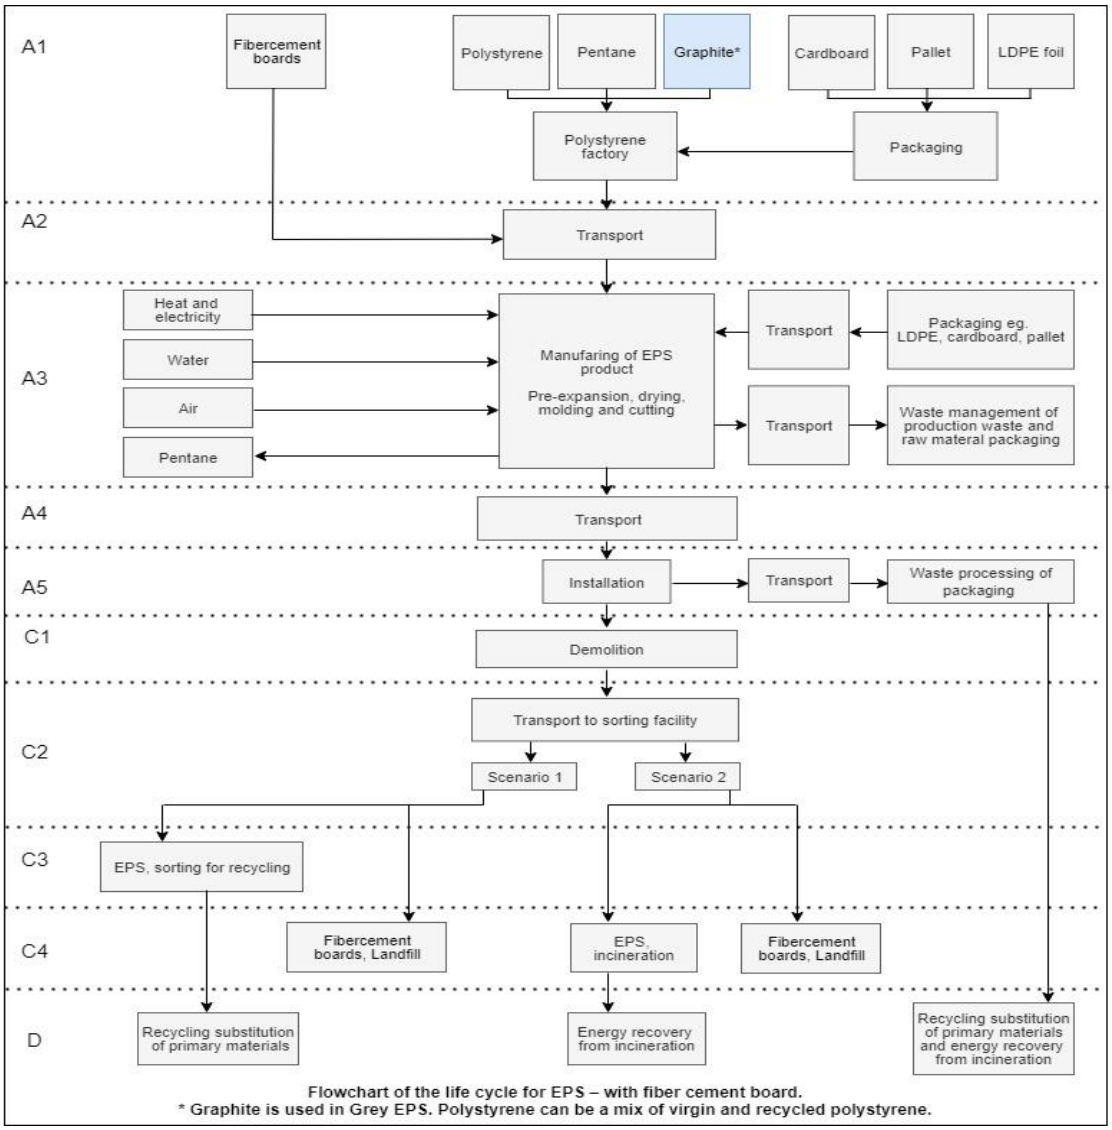
Flowdiagram

Re-use, recovery and recycling potential (D) includes:

In Scenario 1, material credits related to recycling of polystyrene are included in module D.

In Scenario 2, energy credits related to incineration of polystyrene are included in module D.

The packaging materials reach the end-of-waste stage in module A5, and the benefits from recycling and incineration of the packaging materials are included in module D.



Flowchart of the life cycle for EPS – with fiber cement board.
* Graphite is used in Grey EPS. Polystyrene can be a mix of virgin and recycled polystyrene.

Caption	HWD = Hazardous waste disposed; NHWD = Non-hazardous waste disposed; RWD = Radioactive waste disposed; CRU = Components for re-use; MFR = Materials for recycling; MER = Materials for energy recovery; EEE = Exported electrical energy; EET = Exported thermal energy													
	The numbers are declared in scientific notation, e.g., 1.95E+02. This number can also be written as: 1.95*102 or 195, while 1.12E-11 is the same as 1.12*10-11 or 0.0000000000112.													

BIOGENIC CARBON CONTENT PER 1 m³ of insulation material with λ-value = 0,034W/mK		
Parameter	**Unit**	**At the factory gate**
Biogenic carbon content in product	kg C	2,47E+00
Biogenic carbon content in accompanying packaging	kg C	8,12E+00
Note: 1 kg biogenic carbon is equivalent to 44/12 kg of CO2		

Additional information

LCA interpretation

The A1 input for the fiber cement board is the main contributer to the environmental impacts. This is due to the high density of the fiber cement board compared to the density of the insulation material.

If we look at the product as if it was without the fiber cement board, the raw material for the insulation material, polystyrene and the energy consumtion related to the A3 production is the main contributor to the environmental impacts. However, for scenario two, where the insulation material is sent for incineration, this contributes most to the impact category GWP-total. For both scenarios, module A1 account for the maximum contribution to the majority of the 19 impact categories.

Technical information on scenarios

Transport to the building site (A4)

Scenario information	Value	Unit
A4 Transport Type, 1st means of transport	Large truck (more than 115 m³, more than 32	-
Transport Distance, 1st means of transport	300	km
Capacity utilisation, 1st means of transport	9	%
A4 Transport Type, 2nd means of transport	-	-
Transport Distance, 2nd means of transport	-	km
Capacity utilisation, 2nd means of transport	-	%
Gross density of products transported (incl. packaging)	98,8	kg/DU

Installation of the product in the building (A5)

Scenario information	Value	Unit
Ancillary materials	-	kg
Water use	-	m3
Other resources use	-	kg
Energy type and consumption	-	kWh
Waste handling of packaging	18,29	kg
Direct emissions to air, soil or water	-	kg

End of life (C1-C4)

Processes	**Scenario** 1	**Scenario** 2
Collected separately [kg]	-	-
Collected with mixed waste [kg]	-	-
For reuse [kg]	-	-
For recycling [kg]	26,2	-
For energy recovery from incineration [kg]	0	26,2
For final disposal, fiber cement [kg]	54,27	54,27
Assumptions for scenario development	See scenario descriptions.	See scenario descriptions.

Re-use, recovery and recycling potential (D)

Processes	**Scenario** 1	**Scenario** 2	Unit
Recycling from A5 [kg]	17,29	17,29	kg
Energy recovery from A5 [MJ]	8,08	8,08	MJ
Recycling from C3 [kg]	26,20	-	kg
Energy recovery from C4 [MJ]	0,00	441,62	MJ

Indoor air

The EPD does not give information on release of dangerous substances to indoor air because the horizontal standards on the relevant measurements are not available. Read more in EN15804+A2 chapter 7.4.1.

Soil and water

The EPD does not give information on release of dangerous substances to soil and water because the horizontal standards on the relevant measurements are not available. Read more in EN15804+A2 chapter 7.4.2.
