J. A. Plast MD-24078-EN 30-05-2024 30-05-2029

VERIFIED ENVIRONMENTAL PRODUCT DECLARATION | ISO 14025 & EN 15804

#### **Owner of declaration** J. A Plast Vestervigvej 163, 7755 Bedsted

65699818

#### **Programme** EPD Danmark

www.epddanmark.dk

 $\Box$  Industry EPD  $\boxtimes$  Product EPD

#### Declared product(s)

1 Pcs Through tile

Number of declared datasets/product variations: 1

#### Production site

Vestervigvej 163 7755 Bedsted Denmark

#### Use of Guarantees of Origin

- oxtimes No certificates used
- □ Electricity covered by GoO
- □ Biogas covered by GoO

#### Declared unit

1 Through tile

### Year of production site data (A3) 2022

**EPD version** Version 1.0

### J.A. PLAST®

**Kepddanmark** 

#### **Issued:** 30-05-2024

5-2024

30-05-2029

Valid to:

#### Basis of calculation

This EPD is developed and verified in accordance with the European standard EN 15804+A2.

#### Comparability

EPDs of construction products may not be comparable if they do not comply with the requirements in EN 15804. EPD data may not be comparable if the datasets used are not developed in accordance with EN 15804 and if the background systems are not based on the same database.

#### Validity

This EPD has been verified in accordance with ISO 14025 and is valid for 5 years from the date of issue.

#### Use

The intended use of an EPD is to communicate scientifically based environmental information for construction products, for the purpose of assessing the environmental performance of buildings.

#### EPD type

Cradle-to-gate with modules C1-C4 and D
Cradle-to-gate with options, modules C1-C4 and D
Cradle-to-grave and module D
Cradle-to-gate
Cradle-to-gate with options

CEN standard EN 15804 serves as the core PCR

Independent verification of the declaration and data, according to EN ISO 14025

### Product information

**Product description** 

The main product components are shown in the table below.

Material	Weight-% of declared product
HIPS sheet	63 - 46%
ABS	0,8 - 1,2%
Steel	0 - 0,2%
EPDM	0 - 21,6%
Polychloroprene	0 - 10,1%
Butyl adhesive	0 - 0%
HIPS Granulate	0-33%
Paint	3-5%

Product and product no.	Weight per piece [g]
Tubetile TT2	448
Tubetile TT1	467
Bird and Bat Tile	424
AZ	538
GS	632

#### **Product packaging:**

The composition of the sales- and transport packaging of the product is shown in the table below.

Material	Weight of packaging material (kg)	Weight-% of packaging
Cardboard, packaging	1000	44%
EU Pallet, packaging	1250	56%
Total	2,250	100%

Representativity

This declaration, including data collection and the modeled foreground system including results,

represents the production of J. A. Plast Through tiles on the production site located in Bedsted, Denmark. Product specific data are based on average values collected in the period January 2022 to December 2022.

This EPD represents 5 different types of J. A. Plast Through Tiles. Each type has been modelled separately, but as the results varied more than +-10%, the results are declared as a mixed worst-case scenario.

Background data is based on Managed LCA Content (MLC) database from Sphera (version 2023.1) and Ecoinvent database version 3.8 and the data is less than 10 years old. Generally, the used background datasets are of high quality, and the majority of the datasets are only a couple of years old.

#### **Hazardous substances**

J. A. Plast Through Tiles do not contain substances listed on the "Candidate List of Substances of Very High Concern for authorisation"

#### (http://echa.europa.eu/candidate-list-table)

#### Product(s) use

J. A. Plast Through Tiles are used to lead e.g. cables through a roof construction with minimal risk of water intrusion.

#### **Essential characteristics**

Technical information can be obtained by contacting the manufacturer or on the manufacturers website:

#### https://japlast.com/

**Reference Service Life (RSL)** 

N/A

#### **Picture of product(s)**

Below are pictures of the five products covered by this EPD.

Figure 1 Tubetile TT1, Tubetile TT2, Bird and Bat Tile, AZ and GS.

## LCA background

#### **Declared unit**

The LCI and LCIA results in this EPD relates to 1 J. A. Plast Through Tile.

Name	Value	Unit
Declared unit	1	Pcs
Density	0,424-0,632	kg/Pcs
Conversion factor to 1 kg.	2,35-1,58	-

#### **Functional unit**

#### Not defined

#### PCR

This EPD is developed according to the core rules for the product category of construction products in EN 15804:2012+A2:2019, which serves as the core PCR.

#### Flowdiagram

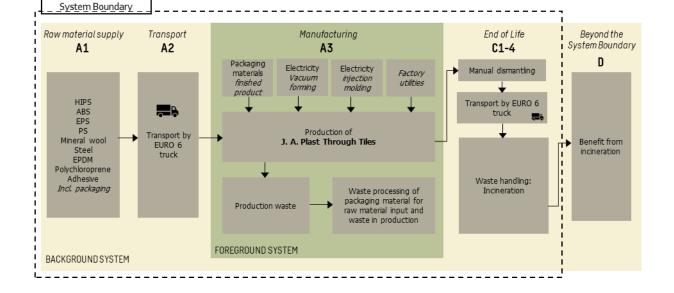

#### **Energy modelling principles**

#### Foreground system:

No use of certified green electricity in the foreground system. The products are produced using electricity modelled as Danish residual electricity mix from 2021 in the production.

#### Background system:

No use of certified green electricity in the background system. Upstream processes are modelled using national energy mixes. Downstream processes are modelled using national energy mixes.

#### System boundary

This EPD is based on a cradle-to-gate LCA with life cycle modules A1-3, C1-4 and D declared, in which 100 weight-% has been accounted for.

The general rules for the exclusion of inputs and outputs follows the requirements in EN 15804, 6.3.5, where the total of neglected input flows per module shall be a maximum of 5 % of energy usage and mass and 1 % of energy usage and mass for unit processes. Packaging material for some of the raw materials in module A1 has been excluded as no data was available. This exclusion of data is in alignment with the requirements in EN 15804.

#### Product stage (A1-A3) includes:

- A1 Extraction and processing of raw materials
- A2 Transport to the production site
- A3 Manufacturing processes

The product stage includes the acquisition of raw materials, on-site manufacturing, external component sourcing, and assembly. J. A. Plast produces vacuum-shaped and injection molded components, purchasing plastic sheets and granulates. The vacuum shaping process generates approximately 50% waste, which is internally recycled. Packaging for materials, delivered on euro pallets, is not factored due to data unavailability.

The Bedsted facility's production involves plastic injection and vacuum shaping, with electricity for machinery and utilities included in the product stage. Post-assembly, J. A. Plast's products are packaged using EU pallets and cardboard, which are accounted for in module A3. EU pallets are assumed to be reused 25 times, and biogenic carbon content from cardboard and wood is calculated according to EN16485 standards.

Waste from production and raw material packaging is managed up to the "end-of-waste-state" in module A3, including a waste treatment breakdown of 92% recycling, 4% incineration, and 4% landfill. According to EN15804+A2 §6.3.5.2, waste treatment benefits are not declared in module D but are reported within module A3.

#### End of Life (C1-C4) includes:

Module C1 is assumed to be zero using manual dismantling.

In C2, the transport distances scenario is set to 50 km by truck based on a Danish national scenario.

In module C3 the declared product is assumed to be incinerated.

### Re-use, recovery and recycling potential (D) includes:

Module D includes reuse, recovery and/or recycling potential, expressed as net impact and benefits, due to reuse, recycling and incineration of materials with energy recovery in module C3.

The energy recovery is credited in module D and the energy recovered is based on the calorific values of the different raw materials. Datasets for energy recovery efficiency at the plant have been adjusted to be representative of the efficiency for heat and electricity recovery at Danish combined heating and power plants (CPH plant). The total efficiency for CHP plants in Denmark is around 85-90% (Hjørring Varmeforsyning, 2023), (Støvring Kraftvarmeværk, 2023), (Hofor, 2023), (Rambøll, 2023), (Lundgren, 2009). The efficiency for electricity is set to 43.5% and the efficiency for heat (steam) is set to 45.5%, which is based on average values from actual CHP plants in Denmark (Hjørring Varmeforsyning, 2023), (Støvring Kraftvarmeværk, 2023).

	BIOGENIC CARBON CONTENT PER J. A. THROUGH TILE										
Parameter	Unit	At the factory gate									
Biogenic carbon content in product	[kg C]	0,00E+00									
Biogenic carbon centent in accompanying packagaing	[kg C]	1,02E+00									
Note		1 kg biogenic carbon is equivalent to $44/12$ kg of CO <sub>2</sub>									

## Additional information

#### LCA interpretation

The results in accordance with DS/EN 15804+A2 show that the life cycle modules A1-A3 have the largest contribution to all 13 core environmental impact categories.

For the declared products the results shows that the vacuum shaped components have the largest contribution in 8 of the 13 core environmental impact categories. The vacuum shaping process has a high energy consumption, which has a large contribution to the emissions of that group.

the process of packaging has the largest contribution to the impact category of Climate Change biogenic, due to the use of the biogenic materials of wood and cardboard. The EoL has a high impact due to the high share of incineration.

#### **Technical information on scenarios**

#### Reference service life

RSL information		Unit
Reference service Life	-	Years

#### End of life (C1-C4)

Scenario information	Value	Unit
Collected separately	-	kg
Collected with mixed waste	0,424-0,632	kg
For reuse	-	kg
For recycling	-	kg
For energy recovery	0,424-0,632	kg
For final disposal	-	kg

#### Re-use, recovery and recycling potential (D)

Scenario information/Materiel	Value	Unit
Displaced material	-	kg
Energy recovery from waste incineration	0,364-0,510	kg

#### Indoor air

The EPD does not give information on release of dangerous substances to indoor air because the horizontal standards on the relevant measurements are not available. Read more in EN15804+A1 chapter 7.4.1.

#### Soil and water

The EPD does not give information on release of dangerous substances to soil and water because the horizontal standards on the relevant measurements are not available. Read more in EN15804+A1 chapter 7.4.2.
